```
AAR89340-R89351 are Cdk-2 interacting peptides identified by an interaction trap assay using conformationally-constrained proteins. The assay comprises providing a host cell (esp. a yeast cell) which contains: the protein gene operably linked to a DNA-binding protein recognition site, pref. LexA, (ii) a 1st fusion gene expressing cdk-2 covalently bonded to a LexA binding protein, and (iii) a 2nd fusion gene expressing a conformationally-constrained (pref. with thioredoxin) protein (either expected to interact with Cdk-2 or a random peptide) covalently bonded to a gene-activating and measuring expression of the reporter gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            as a measure of interaction between Cdk2 and the conformationally constrained protein. The same system may be applied to find proteins that interact with any other protein of interest (e.g. Ras) or proteins having agonist or antagonist activity on such interactions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Interaction trap systems using conformationally-constrained proteins - useful for detection of protein interactions and for identification and isolation of interacting proteins.
                                                                                                                                            Cdk2; cyclin dependent kinase 2; assay; identifying; isolating; cell cycle; interaction; antagonist; conformationally-constrained; agonist; interaction trap; thioredoxin; LexA; two-hybrid system.
                                                                                                       Cdk2-interacting peptide isolated using interaction trap assay.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Score 13; DB 2; Le

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to a process for specifically modulating the properties of an intracellular target molecule T, and/or of a cellular component C which interacts directly or indirectly in a cell chimeric molecule Known as a targeted effector, comprising a recognition moiety capable of recognising T and an effector, comprising a recognition protein or nucleic acid can be used in the preparation of a medicament for the treatment of microbial infections, immunological disorders, meurological disorders metabolic disorders immunological disorders, dental disorders. The present sequence is a mutant of a known anti-Cdkz aptamer used in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                0

                                                                                                                                                                                                                                             Aptamers AAW32116-W32132 have been isolated from a peptide library and are used in a novel interaction trap method for detecting protein interactions and isolating novel proteins. The method involves a host call containing a reporter gene operably linked to a DNA-binding-protein (DBP) recognition site, a fusion gene capable of expressing a fusion protein which is able to specifically bind to the DBP recognition site and a second fusion gene which expresses a second fusion protein which is conformationally constrained and bonded to a gene activating modety. Measuring expression of the reporter gene gives a measure of the interaction between Pl and P2. This method can be used to identify agonists or antagonists for use as therapeutic molecules or for the detect an interaction protein in a population of proteins or to identify a candidate interactor. Using conformationally constrained proteins can provide for tertiary structural analysis and can also protect proteins from callular degradation and/or increase the protein's solubility, and/or otherwise alter the capacity of the candidate interactor to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   0

            prophylaxis and treatment of pathological conditions resulting from a bacterial infection, for evaluating a compound, such as a polypeptide, for the ability to bind a P. aeruginosa mucleic acid, as components of effective antibacterial targets, as targets for antibacterial drugs, including anti-P. aeruginosa durgs, as templates for recombinant production of P. aeruginosa-derived peptides or polypeptides, as target components for diagnosis and/or treatment of P. aeruginosa-causaed infection, and in detection of P. aeruginosa sequences or other sequences of Pseudomonas species using biochip technology. Sequences ABO67826-ABO84396 represent P. aeruginosa polypeptides of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format from USPTO at sequence.html
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to a process for specifically modulating the properties of an intracellular target molecule T, and/or of a cellular component C which interacts directly or indirectly in a cell with the target. The process involves the introduction into the cell of chimeric molecule known as a targeted effector, comprising a recognition moiety capable of recognising T and an effector moiety. The chimeric protein or nucleic acid can be used in the preparation of a medicament for the treatment of microbial infections, immunological disorders,
  pathological conditions, as molecular targets for diagnostics,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 antimicrobial; immunomodulatory; nootropic; neuroprotective; metabolic; neuroleptic; cytostatic; cardiant; infection; immunological disorder; neurological disorder; metabolic disorder; psychiatric disorder;

The polynucleotide sequences given in AAF32699 to AAF32747 encode the human secreted proteins given in AAB64422 to AAB64470. AAB64471 to AAB64548 represent human secreted polypeptide sequences and proteins (AAB64548 represent human secreted polypeptide sequences and proteins homologous to them, which are given in the exemplification of the present invention. Human secreted proteins have activities based on the tissues and calls the genes are expressed in Examples of activities include: antiarthritic; immunosuppressive; antirheumatic; antipoliferative; cytostatic; cardiant; vasotropic; cerebroprotective; notropic; neuroprotective; antibacterial; vincide; fungicide; and polypeptides can be used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. They are also used in diagnosing a pathological condition or susceptibility to a pathological condition. Disorders which are diagnosed or treated include autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative
                                                                                                                                                                                  0;
neurological disorders, metabolic disorders, psychiatric disorders, wopathles, genetic disorders, candicovascular disorders and dental disorders. The present sequence is a known anti-Cdk2 aptamer used in the exemplification of the invention

disorders e.g. neoplasms of the breast or liver, cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cerebral ischaemia, angiogenesis, nervous system disorders e.g. Alzheimer's disease, infections caused by bacteria, viruses and fungi and ocular disorders e.g. corneal infection. The polypeptides can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a novel method of selecting target and target binder pairs comprising mixing in a reaction vessel phage expressing biological targets and phage expressing target binders, each having distinguishable selection markers and selecting target and target binder pairs based on the selection markers. The molecules of the invention demonstrate cytostatic activity whilst the method may be useful for selecting target and target binder pairs for preparing a composition for treating cancer. Furthermore, the method may be utilised during gene therapy procedures. The current sequence is that of the cancer-related DGI-2-binder peptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Selecting target and target binder pairs for preparing a composition for treating cancer by mixing in a reaction vessel phage expressing biological targets and phage expressing target binders.
                                                                                                                                     culture of primary tissues, to regenerate tissues and in chemotaxis. The polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities, AAR32690 to AAR32698 and AAB64421 represent sequences used in the exemplification of the present

The invention relates to the isolation of genes AAC59335-C59382 encoding the human secreted proteins AAB3844-B33891. The sequence is a search result from a BLASTX homology search. The genes and proteins are useful for preventing, ameliotrating or treating medical conditions, e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer, and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal cract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, theumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epileppy; and (f) infectious diseases such as viral, bacterial, fungal and parasitic infections
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö

Annexin binding epitope, hepatitis B virus; hepatitis D virus; influenza; benzodiazepine; binding inhibitor; cytomegalovirus; viral infection;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    derivatised with at least one peptide containing an annexin binding epitope of an annexin binding protein (see AAV85082-Y85115) or its fragment. Annexins are calcium dependent phospholipid binding proteins. 1,4-benzodiazepines and 1,4-benzothiazepines can bind to annexin V, as can the hepatitis B small surface antigen. The compositions of the invention bind to cell surface annexins, and inhibit the binding and entry of viruses to the cell. The benzodiazepine derivatives and some related known compounds, are used to treat or prevent diseases involving protein interactions with annexins, particularly viral infections and specifically hepatitis B and/or D, cytomegalovirus or influenza or to screen for compounds that block binding between annexins and their interacting proteins. (Updated on 06-AUG-2003 to correct OS field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This sequence represents a fragment of the hepatitis B virus surface antigen F amino acid sequence. The antigen sequence is used to determine the best sequence to use as a source of peptides for the composition of the invention. The invention relates to benzodiazepine derivatives
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New benzodiazepine and benzothiazepine derivatives, useful for treating or preventing viral infection, contain peptides that include an annexinbinding epitope.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human, chromosome mapping, gene mapping; gene therapy, forensic, food supplement, medical imaging, diagnostic; genetic disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          DB 3; Length 71;
                      Hepatitis B virus surface antigen F amino acid sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       30.0%; Score 6; DB 3

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             요
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to novel genes (ABA11004-ABA21534) and proteins medical conditions e.g. by protein or gene therapy. The genes are medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and covarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune also asserved as served as a served as infections diseases e.g. cerebral anoxia and epilepsy; and (f) infections diseases such as viral, bacterial, fungal and parasitic infections diseases such as viral, bacterial, fungal and parasitic the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ó

Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic polypeptides. The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by P. acnes. The disorders include SAPHO syndrome (synovitis, acne, pustulosis, hypertosis and osteomyelitis), uveitis and endophhalmitis. P. acnes is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The polypeptides may be used as antigens in the production of antibodies polypeptides may be used as antigens in the production of antibodies of specific for P. acnes proteins. These antibodies may also be used to downregulate expression and activity of P. acnes polypeptides and claiming P. acnes presence, for example, by diagnostic agents for determining P. acnes presence, for example, by claim patent did not form part of the printed specification, but was contacting in the printed specification, but was contacting the polyment of the printed specification, but was contacting and activity of P. acnes presence data for child and discontacting assay (ELISA). Note: The sequence data for child activity of the printed specification, but was
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Propionibacterium acnes polypeptides and nucleic acids useful for vaccinating against and diagnosing infections, especially useful for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to isolated polymucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain recardion (PCN) primers, oligomers, and for chomosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed entitly for its useful in gene therapy techniques to restore normal cativity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of supplement. (II) and its binding partners are useful for treating disorders of supplement. (II) and (II) are useful for treating disorders of polypeptide and polymucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations and to produce other types of data and products dependent on DNA and amino acid sequences. Abg00010-Abg30377 represent novel human diagnostic amino acid sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in the form of the printed specification, but was obtained in the contract of the cont
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            0;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            0; Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodiversity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     0; Indels

The invention relates to an isolated polynucleotide (ACF64435-ACF64733)
encoding a Propionibacterium acnes protein. The invention also relates to polypeptides encoded by the polynucleotides (ABM35624-ABM64536) and to immunogenic fragments of P. acnes polypeptides. The invention additionally encompasses expression vectors and host cells comprising a polymetric fusion proteins comprising a polypeptide of the invention, an immunogenic specific for a P acnes of the invention, fusion proteins comprising a polypeptide of the invention; and an isolated T cell population comprising T cells prepared via this method; a vaccine composition (comprising P. acnes polypeptides, this method; a vaccine composition (comprising P. acnes polypeptides, polymerications, or antipolies, fusion proteins, T cell populations, or antipolies, antibodies, fusion proteins, T cell populations or antipol-persenting or determining the presence or absence of P. acnes in a patient; and a method for inhibiting the development of P. acnes in a patient; and a method for inhibiting the development of P. acnes in a proteins, T cell populations or antipol-presenting or treating acnes polypeptides an immune response specific for a P. acnes to polypeptides are useful for diagnosing, preventing or treating acnes protein. The polymucleotides can also be used as probes or primers for nucleic acid hybridisation. The vaccine composition is useful for the immune response against P. acnes, or for treating acnes and the kit is useful for performing a diagnostic assay. The present contain an immunogenic region. Note The sequence data for this patent did not form part of the printed specification, but was the contain an immunogenic region of the sequence data for this patent did not form part of the printed specification, but was contained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New Propionibacterium acnes polypeptides and polynucleotides encoding the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           polypeptide, useful for diagnosing, preventing or treating acne vulgaris, or for stimulating an immune response specific for a P. acnes protein.
                                                                                                                                                                                                                                                                                                                                                                                 Bhatia A,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               XEXEXEX
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to an isolated polynucleotide (ACF64435-ACF64733)
encoding a Propionibacterium acnes protein. The invention also relates to polypeptides encoded by the polynucleotides (ABM35624-ABM64536) and to immunogenic fragments of P. acnes polypeptides. The invention additionally encompasses expression vectors and host cells comprising a polynucleotide of the invention; antibodies against polypeptides of the invention; invention; fusion proteins comprising a polypeptide of the invention; a method for stimulating an immune response specific for a P. acnes polypeptide and an isolated T cell population comprising T cells prepared polypeptide and an isolated T cell population comprising T cells prepared to a vaccine composition (comprising P. acnes polypeptides, polynucleotides, antibodies, fusion proteins, T cell populations, or antigen-presenting cells that express the polypeptides, antibodies, fusion proteins, T cell populations or antigen-presenting cells that express the polynucleotides, antibodies, fusion proteins, T cell populations or antigen-presenting cells that express the polypeptides are useful for diagnosing, preventing cells that express the proteins, T cell populations or antigen-presenting cells that express the proteins. T cell populations or antigen-presenting cells that express the proteins, or for stimulating an immune response specific for a P. acnes for mucleic acid hybridistation. The polynucleotides can also be used as probes or primers for remaining an immune response expectition of an immune response expective and the protein and primers for the polynucleotides can also be used as probes or primers for etimulations of an immune compassition its useful for the polynucleotides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ·

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        stimulation of an immune response against P. acnes, or for treating acne, and the kit is useful for performing a diagnostic assay. The present sequence represents a polypeptide predicted to be encoded by an ORF (open reading frame) contained within the P. acnes polynucleotides of the invention. Note: The sequence data for this parent did not form part of the printed specification, but was obtained in electronic format directly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New Propionibacterium acnes polypeptides and polynucleotides encoding the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                polypeptide, useful for diagnosing, preventing or treating acne vulgaris, or for stimulating an immune response specific for a P. acnes protein.
                                                                                                                                                                                                                                                        Maisonneuve JL;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to novel human ORFX polypeptides and their coding sequences (ABP63631-ABP64681 and ABQ98194-ABG99267). The sequences were discovered in human atherogenic cells, in particular in platelets and human umbilital vein endothelial cells (HUVEC) and are expressed in many other tissues as well. Atherogenic cells are cells which have the potential to develop atherosclerotic plaques. The ORFX polypeptides and nucleic acids are useful for treating or preventing a pathological condition associated with an ORFX-associated discase, each cancer, cardiovascular disease, allergy, autoimmune disease, wound healing, blood for this patent did not form part of the printed specification, but was obtained in electronic format directly from the USPTO web site at sequence.html?DocID=20020082206

Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic polypeptides. The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by P. acnes. The disorders include SABHO syndrome (synovitis, acne, pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis. P. acnes is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The polypeptides may be used as antigens in the production of antibodies specific for P. acnes proteins. These antibodies can be used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    downregulate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used as diagnostic agents for determining P. acnes presence, for example, by enzyme linked immunosorbent assay (ELISA). Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Propionibacterium acnes polypeptides and nucleic acids useful for vaccinating against and diagnosing infections, especially useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Propionibacterium acnes predicted ORF-encoded polypeptide #3944.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         .;

The invention relates to an isolated polynuclectide (ACF64435-ACF64733)

encoding a Propionibacterium acnes protein. The invention also relates to polypeptides encoded by the polynucleotides. The invention and to immunogenic fragments of P. acnes polypeptides. The invention additionally encompasses expression vectors and host cells comprising a colynucleotide of the invention; antibodies against polypeptides of the invention; polypeptide of the invention; dual of the invention; and invention and an isolated T cell population comprising T calls prepared to polypeptide and an isolated T cell population comprising T. acnes polypeptides, polymention; antibodies, fusion proteins, T cell populations, or polynucleotides, antibodies, fusion proteins, T cell populations, or antigen-presenting cells that express the polypeptide, antibodies, fusion proteins, T cell populations, or patient, and a method for inhibiting the development of P. acnes in a patient, and a method for inhibiting the development of P. acnes in a proteins. T cell populations or antigen-presenting cells that express the polypeptides are useful for diagnosing, preventing or treating acne polypeptides are useful for diagnosing, preventing or treating acne collypeptides are useful for diagnosing, preventing or treating acnes protein. The polymucleotides can also be used as probes or primers for nucleic acid hybridisation. The vaccine composition is useful for the sequence represents a polypeptide predicted to be encoded by an ORF (open the kit is useful for performing a diagnostic assay. The present cand the kit is useful for the vaccine composition assay. The present cand the kit is useful for performing a diagnostic assay. The present cand the kit is useful for performing a diagnostic assay. The present canding trame) contained within the P. acnes polymented presents a polypeptide predicted to be encoded by an ORF (open reading frame) contained within the P. acnes polymented prediction in electronic format directly the printed specification, but was ob
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          0
                                                                                                                                                                                                                                                                                                                                                                                               New Propionibacterium acnes polypeptides and polynucleotides encoding the polypeptide, useful for diagnosing, preventing or treating acne vulgaris, or for stimulating an immune response specific for a P. acnes protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to Pseudomonas aeruginosa polypeptides and the polymuclectides encoding them. The sequences are useful in diagnosis and therapy of pathological conditions as molecular targets for diagnostics, prophylaxis and treatment of pathological conditions resulting from a pacterial infection, for evaluating a compound, such as a polypeptide, for the ability to bind a P. aeruginosa nucleic acid, as components of effective antibacterial targets, as targets for antibacterial drugs, including anti-P. aeruginosa drugs, as templaces for recombinant production of P. aeruginosa drugs, as templaces for recombinant components for diagnosis and/or treatment of P. aeruginosa-caused infection, and in detection of P. aeruginosa sequences or other sequences of pseudomonas species using biochip technology. Sequences ABOS 7826-ABOS 4396 represent P. aeruginosa polypeptides of the invention. Note: The sequence data for this patent did not form part of the printed
                                                                                                                                                                                                                                                                                                                                                                    Novel isolated nucleic acid encoding Pseudomonas aeruginosa polypeptide, useful as molecular targets for diagnostics, prophylaxis and treatment of pathological conditions resulting from bacterial infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; cytokine; cell proliferation; cell differentiation; growth factor;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       haematopoiesis regulation, tissue growth, immunomodulator; activin, inhibin; chemotaxis, chemokinesis, thrombolysis, oncogenesis, proliferation; metastasis, cancer; tumour, haematopoietic disorder, myeloid cell disorder; lymphoid cell disorder; asthma; arthritis; chronic inflammatory condition, proliferative retinopathy; atherosclerosis, coronary heart disease, arterial ischaemia; bone disorder; osteoporosis, vascular growth disorder; tissue regeneration; wound healing; infection; immune disorder;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   specification but was obtained in electronic format from USPTO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   .
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Length 138;

Sequences ABB10981-ABB12330 represent 1350 novel human polypeptides, and caguences AABB10981-ABB12330 represent nuclear caids encoding them. The invention also relates to vectors and recombinant host cells comprising a nucleotide of the invention, methods of producing the novel polypeptides. C antiblodies against the polypeptides, methods of dentifying compounds which bindess against the polypeptides of identifying compounds which polypeptides of the invention have homology to known proteins, thereby giving an insight into their probable biological activities, and hence coptemnial therapeutic applications. The polypeptides of the invention may have various activities; stem cell growth factor activities, of differential therapeutic applications. The polypeptides of the invention may have various activities; stem cell growth factor activity; issue growth activity; immunomodulatory activity; activity, tissue growth activity; is memorated or chemokinetic activities; properties or may be involved in onosogenesis, cancer cell proliferation or metastasis. Chemotocytic activities; receptor or ligand activity; or may be involved in onosogenesis, cancer cell proliferation or metastasis. Coperation or their biological activities; polypeptides and nucleotides of the invention are useful for perventing, treating or ameliorating medical cancers, haemacopoletic disorders (e.g., myeloid or lymphoid cell conditions, e.g., by protein or gene therapy, such conditions include cancers, haemacopoletic disorders (e.g., myeloid or lymphoid cell useful. Polypeptides involved with tissue regeneration and repair is chaemia, bone disorders (e.g., myeloid or lymphoid cell cancers, haemacopoletic disorders (e.g., myeloid or lymphoid cell cancers, haemacopoletic disorders (e.g., costeoprossis), and abnormal vascular growth, Polypeptides involved with tissue so astimate of beating (e.g., of burns, inclsions and ulcers), while those with growth factor activity may be used to promote cell growth. For example, such polypeptides may be used to au
Human proteins and DNA encoding sequences useful for preventing, or ameliorating a medical condition in a mammalian subject e.g. \epsilon

triphosphate-binding protein coupled receptor (GPCR). A polymucleotide of the invention may have a use in gene therapy. The polymucleotide and polypeptide are useful for preparing a composition for treating a patient in need of increased or suppressed activity or expression of the guanosine triphosphate-binding protein coupled receptor. The protein sequences shown in ADC85549-ADC87617 represent GPCR's of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New polynucleotide, useful for preparing a composition for treating a patient in need of increased or suppressed activity or expression of the guanosine triphosphate-binding protein coupled receptor.

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (III). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations and to produce other types of data and products dependent on DNA and amino acid sequences. Abgological activity and activity and activity and activity and activity and produces the polymeration of mutations are sequences. Abgological activity and and an analysing and to produce other types of data and products dependent on DNA and and an activity and activity and activity and activity and produces the products dependent on DNA and and an activity and activity and activity and products dependent on DNA and and activity and activity and activity and activity and activity and products dependent on DNA and and activity and activity and activity and products dependent on DNA and activity and activity and activity and products dependent on DNA and activity and activity and products dependent on DNA and activity and activity and activity and activity and products dependent on DNA and and activity and activity and activity and activity and activity and activity and products dependent on DNA and activity and activity and activity and activity and activity and activity and 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   amino acid sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                       New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                DB 4; Length 201; . 1.3e+02;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Hyperthermophile Methanopyrus kandleri protein #1353.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       hyperthermophile; protein stability enhancement;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                30.0%; Score 6; DB 4

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to Pseudomonas aeruginosa polypeptides and the polynucleotides encoding them. The sequences are useful in diagnosis and therapy of pathological conditions, as molecular targets for diagnostics, prophylaxis and treatment of pathological conditions resulting from a bacterial infection, for evaluating a compound, such as a polypeptide, for the ability to bind a P. aeruginosa nucleic acid, as components of effective antibacterial targets, as targets for antibacterial drugs, including anti-P. aeruginosa drugs, as templates for recombinant production of P. aeruginosa-derived peptides or polypeptides, as target components for diagnosis and/or treatment of P. aeruginosa-caused components for diagnosis and/or treatment of P. aeruginosa-caused of Pseudomonas species using biochip technology. Sequences ABOS4826 represent P. aeruginosa polypeptides of the invention. Note: The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel isolated nucleic acid encoding Pseudomonas aeruginosa polypeptide, useful as molecular targets for diagnostics, prophylaxis and treatment of pathological conditions resulting from bacterial infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          sequence data for this patent did not form part of the printed specification but was obtained in electronic format from USPTO at sequance.html
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human, chromosome mapping, gene mapping, gene therapy, forensic, food supplement, medical imaging, diagnostic, genetic disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     .;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         30.0%; Score 6; DB 7; Length 171; 100.0%; Pred. therapy of pathological conditions, as molecular targets for diagnostics, prophylaxis and treatment of pathological conditions resulting from a bacterial infection, for evaluating a compound, such as a polypeptide, for the ability to bind a P. aeruginosa nucleic acid, as components of effective antibacterial targets, as targets for antibacterial drugs, including anti-P. aeruginosa drugs, as templates for recombinant production of P. aeruginosa drugs, as templates for recombinant components for diagnosis and/or treatment of P. aeruginosa caused infection, and in detection of P. aeruginosa sequences or other sequences of pseudomonas species using biochip technology. Sequences ABO67826-8BO84396 represent P. aeruginosa polypeptides of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format from USPTO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This sequence is the woodchuck hepatitis virus surface antigen PreS2-S region. This sequence was used to create a recombinant antigen library. The library comprises recombinant nucleic acids encoding antigenic polypeptides and is produced by recombination of at least two forms of nucleic acid, differing by at least two nucleotides, encoding a disease-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Recombinant multivalent antigenic polypeptide produced by recombining nucleic acid sequences and screening, used in vaccines against e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    PreS2-S; recombinant antigen library; disease-related antigen;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          multivalent antigenic polypeptide production; infection; allergen; asthma; autoimmune disease; rheumatoid arthritis; diabetes; therapy;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      0
                                                                                                                                                                                                                                                                                                                                                                       The invention comprises the amino acid sequence of proteins from the hyperthermophile Methanopyrus kandleri, the invention also comprises the complete genome from Methanopyrus kandleri. The Methanopyrus kandleri proteins of the invention are useful for enhancing the stability and/or activity of other proteins. The Methanopyrus kandleri genome is useful in a variety of diagnostic and analytical methods. The present amino acid sequence represents a Methanopyrus kandleri protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to Pseudomonas aeruginosa polypeptides and the polynucleotides encoding them. The sequences are useful in diagnosis and
                                                                                                                                                                                                                                   New isolated nucleic acids encoding any of about 1700 Methanopyrus kandleri proteins, and the encoded proteins, useful as a medicaments or as diagnostic agents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel isolated nucleic acid encoding Pseudomonas aeruginosa polypeptide, useful as molecular targets for diagnostics, prophylaxis and treatment c pathological conditions resulting from bacterial infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

related antigenic polypeptide. The library can be used to produce a recombinant multivalent antigenic polypeptides of the invention, that contains at least two antigenic determinants (AD) from different polypeptides. The multivalent antigenic polypeptides are used in vaccines to induce a protective or therapeutic response to a wide variety of infectious agents (bacteria, viruses, parasites, including Plasmodium falciparum); allergens, asthma; autoimmune disease (e.g. rheunatoid ard canner, also, where directed against sperm antigens, they can be used for contraception. The multivalent peptides can be evolved to induce an optimised immune response against a wide variety of antigens, particularly a broad spectrum response to many different strains of a pathogen, including strains that are likely to appear in the future. (Updated on 17-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Central nervous system; CNS; autoimmune disease; rheumatoid arthritis; hyperproliferative disorder; neoplasm; cardiovascular disorder; cardiac arrest; cerebrovascular disorder; ischaemia; angiogenesis; nervous system disorder; Alzheimer's disease; AIDS; ocular disorder; acquired immunodeficiency virus; dysphagia; gastrointestinal disorder; adenocarcinoma; reproductive system disorder; testicular feminisation; endocrine disorder; diabetes; cancer; leukaemia; neovascularisation; respiratory disorder; renal disorder; kidney failure; blood disorder; myocardial infarction; wound healing; cell proliferation; skin aging; food additive; food preservative; gene therapy.

The invention describes an isolated nucleic acid molecule (I) encoding a novel central nervous system protein. (I) and polypeptides (III) encoded by (I), are used to treat a medical conditions and in diagnosis of a pathological condition. Disorders which are diagnosed or treated include autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g. neoplasms of the breast or liver, cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. carebral ischaemia, angiogenesis, nervous system disorders e.g. Alzheimer's disease and amylotrophic lateral sclerosis, infections caused by bacteria, viruses e.g. Acquired immunodeficiancy virus (AIDS) and fungi, ocular disorders e.g. Acquired immunodeficiancy virus (AIDS) and fungi, ocular disorders e.g. corneal infection, gastrointestinal disorders e.g. dysphagia, adenocarcinomas and irritable bowel syndrome, reproductive system disorders e.g. testicular feminisation, endocrine disorders e.g. diabetes and pituitary dwarfism, cancers and disorders at the cellular level e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New isolated nucleic acid encoding a protein for diagnosing, preventing, treating or ameliorating medical conditions and used as food additives or

Corransfection of human hepatoma HuH-7 cells with wild-type WHV pCWM82 and mutant core construct pCN4 resulted in an 85% inhibition of wild-type viral DNA toxic to HCC cells. The dominant negative core polypeptide was not toxic to HCC cells. The dominant negative effects on viral replication are consistent over a range of hepathavirus species and can be utilised in the treatment of viral infection. (Updated on 17-OCT-2003 to

The invention relates to a method for screening G protein-coupled receptor (GPCR) genes (ABZ42870-ABZ43216) and/or GPCR proteins (ABP95596-ABP95421) by extracting open-reading frames containing 6-8 transmembrane domains with 250-1000 amino acid residues to give a gene homologous with a known GPCR gene. The receptor proteins and encoded genes are useful for studying in vivo signal transduction mechanism and identifying targets for drug development e.g. based on olfactory and gustatory receptors in form of agonists and antagonists by screening intrinsic and extrinsic ligands as bitter taste inhibitors, taste enhancers and fragrance improvers. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence of gpG encoded by segment of Xanthomonas campestris DNA that contains a gene cluster that directs Xanthan biosynthesis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Virtually all of the segment of Xanthomonas campestris DNA that contain a gene cluster that directs Xanthan biosynthesis (AAN70753), codes for protein products. Each gene is designated by a letter (see Fig 11) and its protein product is designated by that letter preceded by '9p' (AAP70455-67). (Updated on 25-MAR-2003 to correct PR field.)

Also included are:
(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense morteic acid; (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (6) producing the polypeptide; (6) inhibiting callular proliferation or the activity of a gene in an operon required for proliferation; (7) identifying a compound that influences the activity of
The invention describes a new isolated nucleic acid encoding a Klebsiella premoniae polypeptide. Also described are: a recombinant expression vector comprising the nucleic acid, operably linked to a transcription regulatory element; and a cell comprising the recombinant expression vector. The nucleic acid is useful for preparing a vaccine composition against Klebsiella pneumoniae. This is the amino acid sequence of a Klebsiella pneumoniae, and the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Antisense; prokaryotic essential gene; cell proliferation; drug design.

                                                                                                                                                                                                                                                           The invention relates to the complete nucleic acid sequence of a new human hepatitis B virus (HBV) genotype, provisionally named genotype G. This genotype was found with a high prevalence in patients chronically infected with HBV and residing in Burope and the USA. The invention relates to a fully defined sequence of 3248 mucleotides as given in sequence that is degenerate to the mentioned sequences. These polymucleotides are useful for HBV genotyping. The proteins encoded by the polymucleotides are useful for detecting antibodies in a biological sample. Ligands that bind to the proteins and antibodies directed against the proteins are useful for detecting the proteins and for detecting the proteins and surfaced against the proteins are useful for detecting the proteins and solventing and preparing a vaccine or medicament for treating HBV infections. The

novel molecule (MOL) proteins numbered MOLI-23, referred to generally in the specification as MOLX. Compounds which modulate the function of the MOLX proteins of the invention, MOLX agonists or antagonists, may have cardiant, antidiabetic or antiatrateriosclerotic activities. In addition, the DNA and protein sequences disclosed may prove useful for gene therapy. The protein, nucleic acid or antibody is useful for gene composition for treating or preventing a MOLX-associated disorder, for example cardiomyopathy, diabetes or atherosclerosis. The present sequence is the amino acid sequence of a MOL protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       , Vernet CAM, Shimkets RA, Anderson DW, Padigaru M;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       novel molecule (MOL) proteins numbered MOLI-23, referred to generally in the specification as MOLX. Compounds which modulate the function of the MOLX proteins of the invention, MOLX agonists or antagonists, may have cardiant, antidiabetic or antazeric/sclerotic activities. In addition, the DNA and protein sequences disclosed may prove useful for gene composition for treating or preventing a MOLX-associated disorder, for example cardiomyopathy, diabetes or atherosclerosis. The present sequence is the amino acid sequence of a MOL protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                               Mezick AJ;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New MOLX polypeptide, nucleic acid or MOLX-specific antibody, useful for preparing a composition for treating or preventing a MOLX-associated disorder, e.g., cardiomyopathy, diabetes or atherosclerosis.
                                                                                                                                                                                                                                                                                                                                       Padigaru M;

novel molecule (WOL) proteins numbered MOL1-23, referred to generally in the specification as MOLX. Compounds which modulate the function of the MOLX proteins of the invention, MOLX agonists or antagonists, may have cardiant, antidiabetic or antidazeric or attidiate or attidiate or attidiate or attidiate or attidiate or attidiate or attidiate. In addition, the DNA and protein sequences disclosed may prove useful for gene therapy. The protein, nucleic acid or antibody is useful for preparing a composition for treating or preventing a MOLX-associated disorder, for example cardiomyopathy, diabetes or atherosclerosis. The present sequence is the amino acid sequence of a MOL protein of the invention.
                                                                                                                                                               Fernandes ER, Vernet CAM, Shimkets RA, Anderson DW, Padigaru M; Boldog FL, Li L, Shenoy SG, Casman SJ, Rastelli L, Alsobrook JP; Burgess CB, Grosse WM, Gusev VY, Ji W, Lepley DM, Liu X, Mezick AJ; Patturajan M, Shen L, Spaderna SK, Spytek KA, Szekeres ES; Taupier RJ, Tchernev VT, Zerhusen BD, Voss EZ;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This invention relates to novel human nucleic acid sequences which encode
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New MOLX polypeptide, nucleic acid or MOLX-specific antibody, useful for preparing a composition for treating or preventing a MOLX-associated disorder, e.g., cardiomyopathy, diabetes or atherosclerosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          molecule protein; MOL protein; MOLX; MOLX agonist; MOLX antagonist;

novel molecule (MOL) proteins numbered MOL1-23, referred to generally in the specification as MOLX. Compounds which modulate the function of the MOLX proteins of the invention, MOLX agonists or antagonists, may have cardiant, antidiabetic or antiatreticolerchic activities. In addition, the DNA and protein sequences disclosed may prove useful for gene composition for treating or preventing a MOLX-associated disorder, for example cardiomyopathy, diabetes or atherosclerosis. The present sequence is the amino acid sequence of a MOL protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                0

```

```
protein comprising one or more conservative substitutions or having at least 95% identity to one of the 141 proteins. Also included are a composition comprising NOVX (or a NOVX nucleic acid molecule (NA)), a kit comprising the composition of NOVX in one or more containers, an isolated nucleic acid molecule encoding a NOVX protein, producing NOVX (comprising culturing a cell under conditions that lead to expression of the polypeptide, where the cell comprises a vector comprising NOVX MA), identifying an agent that binds to NOVX, identifying a potential comprises a vector comprising NOVX MA, identifying a potential conspiculation or a mediator of activity of or latency or predisposition to a pathology associated with NOVX, modulating the activity of NOVX, treating or pathology associated with NOVX, treating a pathological state in a mammal, a vector comprising the activity of NOVX, treating or preventing a pathology associated with NOVX, treating a pathological state in a mammal, a vector comprising the NOVX nucleic acid molecule, a cell comprising the vector, an antibody that immunospecifically binds to NOVX, determining the presence or amount of NOVX or the nucleic acid molecule in a first mammalian subject. The methods and compositions of the present invention are useful for the diagnosis and creation of disorders associated with aberrant expression or activity of treatment of disorders associated with aberrant expression or activity of treatment of activity of the diagnosis and treatment of disorders associated with aberrant expression or activity of treatment.
                                                                                                                                                                                                                                                                                                                                    the NOVX polypeptide, such as cancer, diabetes, obesity, and endocrine, CNS and infilammatory disorders. They can also be used in various detection and screening assays, chromosome mapping, tissue typing, gene therapy and predictive medicine. The present sequence represents a NOVX
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; NOVX; secreted protein; cancer; diabetes; obesity; endocrine disorder; CNS disorder; inflammatory disorder; gene therapy.

Human secreted protein NOV2f.

```
The invention relates to a new isolated polypeptide (designated NOVX) comprising one of 141 fully defined sequences, their mature forms, a protein comprising one or more conservative substitutions or having at least 95% identity to one of the 141 proteins. Also included are a composition comprising NOVX (or a NOVX nucleic acid molecule (NA)), a kit composition to composition of NOVX incleic acid molecule encoding a NOVX protein, producing NOVX (comprising prolypeptide, where the call comprises a vector comprising NOVX (comprising polypeptide, where the call comprises a vector comprising NOVX (supering therefore agent that binds to NOVX, identifying a potential therapeutic agent for use in the treatment of a pathology that is related to abstrant expression or physiological interactions of NOVX, screening for a modulator of activity of or latency or predisposition to a pathology associated with NOVX, modulating the activity of NOVX, treating cor preventing a pathology associated with NOVX, unaminating the pathology associated with NOVX, treating a pathology associated with NOVX, treating call comprising the vector, an antibody that immunospecifically binds to molecule in a sample. And determining the presence or amount of NOVX, treating correction and persence or amount of NOVX or hundred or or preventing and determining the presence or amount of NOVX or hundred or or preventing and determining the presence or amount of NOVX or hundred or or preventing and determining the molecule in a sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        compositions of the present invention are useful for the diagnosis and treatment of disorders associated with aberrant expression or activity of the NOVY polypeptide, such as cancer, diabetes, obesity, and endocrine, CNS and inflammatory disorders. They can be be used in various detection and screening assays, chromosome mapping, tissue typing, gene therapy and predictive medicine. The present sequence represents a NOVX
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        molecule in a sample, and determining the presence of or predisposition to a disease associated with altered levels of expression of NOVX or the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New isolated NOVX polypeptides useful for treating, preventing and diagnosing pathological conditions with NOVX-associated disorders, such as cancer, obesity, diabetes and inflammatory or CNS diseases.

New isolated NOVX polypeptides useful for treating, preventing and diagnosing pathological conditions with NOVX-associated disorders, such as cancer, obesity, diabetes and inflammatory or CNS diseases.

Claim 1; SEQ ID NO 16; 418pp; English.

The invention relates to a new isolated polypeptide (designated NOVX) comprising one of 141 fully defined sequences, their mature forms, a protein comprising one or more conservative substitutions or having at least 95% identity to one of the 141 proteins. Also included are a composition comprising NOVX (or a NOVX nucleic acid molecule (NA)), a kit comprising the composition of NOVX in one or more containers, an isolated culturing a cell under conditions that lead to expression of the polypeptide, where the cell comprises a vector comprising NOVX NA), identifying an agent that binds to NOVX, identifying a potential therapeutic agent for use in the treatment of a pathology that is related to aberrant expression or physiological interactions of NOVX, screening for a modulator of activity of or latency or predisposition to a pathology associated with NOVX, modulating the activity of NOVX, treating or preventing a pathology associated with NOVX, nucleic acid molecule, a state in a mammal, a vector comprising the NOVX nucleic acid molecule, a cell comprising the vector, an antibody that immunospecifically binds to NOVX, determining the presence or amount of NOVX or the nucleic acid molecule in a sample, and determining the presence of or predisposition genetic disorders or other traits to assess biodiversity

(I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to reat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations
                                                          of
to a disease associated with altered levels or expression or not of included and compositions of the present invention are useful for the diagnosis and treatment of disorders associated with aberrant expression or activity of the NOVX polypeptide, such as cancer, diabetes, obesity, and endocrine, CNS and inflammatory disorders. They can also be used in various detection and screening assays, chromosome mapping, tissue typing, gene detection and screening assays, chromosome mapping, tissue typing, gene
                                                                                                                                                                                                                                                            Gaps

The invention relates to Pseudomonas aeruginosa polypeptides and the polymucleotides encoding them. The sequences are useful in diagnosis and therapy of pathological conditions, as molecular targets for diagnostics, prophylaxis and treatment of pathological conditions resulting from a bacterial infection, for evaluating a compound, such as a polypeptide, of the ability to bind a P. aeruginosa nucleic acid, as components of effective antibacterial targets, as targets for antibacterial drugs, including anti-P. aeruginosa drugs, as templates for recombinant of P. aeruginosa drugs, as templates for recombinant components for diagnosis and/or treatment of P. aeruginosa-caused infection, and in detection of P. aeruginosa sequences or other sequences of Pseudomonas species using biochip technology Sequences ABO67826-ABO84396 represent P. aeruginosa polypeptides of the invention. Note: The sequence data for this patent did not form part of the printed specification but, was obtained in electronic format from USPTO at
                                                                                                                                                                                                           0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel isolated nucleic acid encoding Pseudomonas aeruginosa polypeptide, useful as molecular targets for diagnostics, prophylaxis and treatment of pathological conditions resulting from bacterial infection.
         and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at the wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Bacterial infection; Pseudomonas aeruginosa infection; antibacterial.

                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to identifying target proteins (ABB90790-ABB94016) for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant organisms using suitable search parameters, where plant sequences having an E-value greater by a factor of 3 than the E-value of most similar non-plant sequences are selected. The polypeptides or nucleic acids encoding them are useful for identifying modulators. The identified modulators are useful as
                                                                                                                                                                                                                                                                                                                                                                  Identifying plant target proteins for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant

The present invention relates to a method of producing a transformed plant that selectively increases production of gamma-aminobutyric acid (GABA) in response to a signal, by incorporating into the plant's genome a DNA construct with a non-constitutive promoter operably linked to a polynucleotide encoding a functional plant glutamic acid decarboxylase (GAD), to provide a transformed plant that expresses the GAD coding sequence in response to a signal. Plants of this type have an enhanced ability to tolerate environmental or other stresses. The present sequence is the A. thaliana GADI protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human, organic cation transporter-like protein, OCTlp, transporter; transmembrane, nootropic, neuroprotective, neuroleptic, anticonvulsant, antiParkinsonian; antidepressant; cellular process; cell proliferation; screen; treatment; prevention; diagnosis; neurodegenerative disorder; Alzheimer; Parkinson's; Huntington, ALS; amyotrophic lateral sclerosis; CNS disorder; central nervous system, schizophrenia; depression; behavioural; sleep disorder; Alzheimer's; eating disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Making transformed plants that selectively increase gamma-aminobutyric acid production, by incorporating a DNA construct with a polynucleotide encoding a plant glutamic acid decarboxylase enzyme into plant's genome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
GAD; plant GABA production regulation; glutamic acid decarboxylase; plant stress; GABA; gamma-aminobutyric acid; stress resistance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ·

                                                                                                                                                                                                          The present sequence is a human OCTIP (organic cation transporter-like protein), a member of the superfamily of sugar and other transporter molecules that have 12 transmembrane domains. The sequence is derived from a human foetal brain cDNA library. The protein is highly expressed an brain tissue and has nootropic, neuroprotective, neuroleptic, anticonvulsant, antiParkinsonian, antidepressant activities. The present sequence is used to regulate a variety of cellular processes e.g. cell proliferation, differentiation and survival, screen octip modulators and detect mutation in OCTIP gene. OCTIP modulators can be used to treat or prevent chronic neurodegenerative disorders (e.g. Alzheimer's, Parkinson's , Huntington's and ALS), CNS disorders (e.g. Alzheimer's, panic, depression), behavioural, sleep and eating disorders
                                                                                                                New nucleic acid encoding human organic cation transporter-like protein, used for prevention, treatment and diagnosis of e.g. neurological,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Pain disorder; inflammatory pain; chronic pain; neuropathic pain; causalgia; fibromyalgia; cancer pain; migraine; headache; tissue pain; cardiovascular disorder; analgesic; human; 57145; OCT-5.

                                                                                                                                                                      à
                                                                                                                                                                                                                                                                                The present invention relates to a method of treating a subject having a pain disorder characterised by aberrant 577, 20739 or 57145 polypeptide activity or nucleic acid expression. The method involves administering a modulator of 577 (also known as sodium dependent proline transporter). 20739 (also known as P21-activated kinase 3 (PpK-3)) or 57145 (also known as OCT-5). The 577, 20739 or 57045 modulator is useful for treating pain disorders like inflammatory pain, chronic pain, neuropathic pain, causalgia, fibromyalgia, cancer pain, migraine/headache pain and tissue pain. The invention also describes methods for diagnosis and prognosis of various cardiovascular disorders, and for identification of subjects

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a method of identifying a binding partner for synaptic vesicle protein 2 (SV2), involves incubating SV2 protein with levetiracetam and a potential binding partner and determining if the potential binding partner modulates the binding of levetiracetam to the SV2 protein or fragment, thus identifying a binding partner for the SV2 protein. The method is useful for identifying a binding partner for synaptic vesicle protein 2 and the identified binding partner for synaptic vesicle protein 2 and the identified binding partner is useful for treating epilepsy, epileptogenesis, seizure disorders, convulsions,
                                                                                                                                                                                 exhibiting a predisposition to such conditions. The present sequence is human 57145 protein

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a method of identifying a binding partner for synaptic vesicle protein 2 (SV2), involves incubating SV2 protein with levetiracetam and a potential binding partner and determining if the potential binding partner modulates the binding of levetiracetam to the SV2 protein or fragment, thus identifying a binding partner for the protein. The method is useful for identifying a binding partner for synaptic vesicle protein 2 and the identified binding partner is useful for treating epilepsy, espileptogenesis, seizure disorders, convulsions, depression, anxiety, cerebral ischaemia, myotonia, stroke, Tourette's syndrome, neonatal cerebral haemorrhage, Parkinson's disease, Alzheimer's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Identifying binding partner for synaptic vesicle protein 2 (SV2) for treating epilepsy, Parkinson's disease, Alzheimer's disease, involves determining binding partner which modulates binding of levetiracetam or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

The invention relates to a novel method for treating a neurological disorder associated with synaptic vesicle function, endocrinopathy or hormonal disease which comprises administering a compound or agent that modulates a function or activity of an SV2 (synaptic vesicle protein 2) protein. The method of the invention has anticonvulsant, neuroleptic, antimantc, antidepressant, tranquiliser, antimigraine, analgesic, cerebroprotective, vasotropic, vulnerary, muscle relaxant, neoropic, cerebroprotective, vasotropic, vulnerary, muscle relaxant, noctropic, relaxant, haemostatic, neuroprotective, antiparkinsonian, noctropic, relaxant, na antidiabetic applications. The method may be useful for treating a neurological disorder, endocrinopathy or hormonal disease associated with synaptic vesicle function. The neurological disorder is cosmitive disorders, movement disorders, bipolar disorders's disease, cognitive disease and dementia. The endocrinological disorder is chosen from endocrinopathies involving hypersecretion or hyposecretion of at least one hormone, gigantism, dwarfism, actmal-medulla-related diseases, hypoglycaemia and circulation shock. The current sequence is that of the human synaptic vesicle protein OP (SVOP) of the invention.
                                                                                                                                                                                                                                                                                                          neurological disorder; synaptic vesicle function; endocrinopathy; hormonal; SV2; synaptic vesicle protein 2; anticonvulsant; neuroleptic; antimimant; antidepressant; tranquiliser; antimigraine; analgesic; cerebroprotective; vasotropic; vulnerary; muscle relaxant; acaricide; relaxant; haemostatic; neuroprotective; antiparkinsonian; nootropic; endocrine; enidabetic; seizure; epilepsy; Parkinson's; Alzheimer's; cognitive; movement; bipolar; neurodegenerative; dementia; gigantism; dwarfism; adrenal-medulla; hypoglycaemia; circulation shock; human; SVOP.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Treating neurological disorder associated with synaptic vesicle function such as seizure, epilepsy, endocrinopathy or hormonal diseases, involves administering compound that modulates function or activity of SV2
                                                                                                                                                                                                                                                                     Human synaptic vesicle protein OP (SVOP)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Disclosure; SEQ ID NO 8; 135pp; English.

```
The invention relates to a novel method for treating a neurological disorder associated with synaptic vesicle function, endocrinopathy or hormonal disease which comprises administering a compound or agent that modulates a function or activity of an SV2 (synaptic vesicle protein 1) protein. The method of the invention has anticonvulsant, neuroleptic, antidepressant, tranquiliser, antimigraine, analgesic, cerebroprotective, vasotropic, vulnerary, muscle relaxant, acaricide, relaxant, haemostatic, neuroprotective, antiparkinsonian, nootropic, relaxant, haemostatic, neuroprotective, antiparkinsonian, nootropic, reating a neurological disorder, endocrinopathy or hormonal disease associated with synaptic vesicle function. The neurological disorder is chosen from seizure, epilepsy, Parkinson's disease, Alzheimer's disease, neurodegenerative disease and demenia. The endocrinological disorder is chosen from endocrinopathies involving hypersecretion or hyposecretion of at least one hormone, gigantism, dwarfism, admenal-medulla-related diseases, hypoglycaemia and circulation shock. The current sequence is that of the Norway rat synaptic vesicle protein OP (SVOP) of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Treating neurological disorder associated with synaptic vesicle function such as seizure, epilepsy, endocrinopathy or hormonal diseases, involves administering compound that modulates function or activity of SV2

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a novel method for the enantiomeric conversion of amines. The method comprises treating a homochiral amine or a mixture of amine enantioners with an enzyme capable of catalyshing oxidation of the amine in a stereoselective manner and, subsequently or simultaneously, treating with a reducing agent. A further method of the invention is useful for directing the evolution of an amine oxidation enzyme e.g., microbial monoamine oxidase (MAO), preferably Aspergillus niger monoamine oxidase or its variant. This method is also useful for increasing the enantioselectivity of an amine oxidase enzyme. The enantioselective amine oxidase enzyme of the invention is useful in deracemization of amines. This sequence represents a variant Aspergillus niger monoamine oxidase protein of the invention.
                                                                                                                                                                                                                                                                                                                      catalysis;

the amine in a stereoselective manner and, subsequently or simultaneously, treating with a reducing agent. A further method of the invention is useful for directing the evolution of an amine oxidation enzyme e.g., microbial monoamine oxidase (MAO), preferably Aspergillus niger monoamine oxidase or its variant. This method is also useful for increasing the enantioselectivity of an amine oxidase enzyme. The enantioselective amine oxidase enzyme of the invention is useful in deracemization of amines. This sequence represents a variant Aspergillus niger monoamine oxidase protein of the invention.

Sequence 610 AA;

The invention relates to a novel method for the enantiomeric conversion of amines. The method comprises treating a homochiral amine or a mixture of amine enantiomers with an enzyme capable of catalysing oxidation of

infection, and in detection of P. aeruginosa sequences or other sequences of Beeudomonas species using biochip technology Sequences ABO67826-
BOB64396 represent P. aeruginosa polypeptides of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format from USPTO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel isolated nucleic acid encoding Pseudomonas aeruginosa polypeptide, useful as molecular targets for diagnostics, prophylaxis and treatment of pathological conditions resulting from bacterial infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to Pseudomonas aeruginosa polypeptides and the polynucleotides encoding them. The sequences are useful in diagnosis and therapy of pathological conditions, as molecular targets for diagnostics, prophylaxis and treatment of pathological conditions resulting from a bacterial infection, for evaluating a compound, such as a polypeptide, for the ability to bind a P. aeruginosa nucleic acid, as components of effective antibacterial targets, as targets for antibacterial drugs, including anti-P aeruginosa drugs, as templates for recombinant production of P. aeruginosa drugs, as templates for recombinant production of P. aeruginosa drugs, as templates for accombinant production of P. aeruginosa-caused
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                predictor set; protein tyrosine kinase activity modulator; protein tyrosine kinase; cytostatic;
                                                                                                                                                     Bacterial infection; Pseudomonas aeruginosa infection; antibacterial.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      DB 7; Length 800; 3.9e+02;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human src biomarker polypeptide SEQ ID NO:339.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Disclosure; SEQ ID NO 24635; 455pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a novel method for the enantiomeric conversion of amines. The method comprises treating a homochiral amine or a mixture of amine enantiomers with an enzyme capable of catalysing oxidation of the amine in a stereoselective manner and, subsequently or simultaneously, treating with a reducing agent. A further method of the invention is useful for directing the evolution of an amine oxidation enzyme e.g., microbial monoamine oxidase (MAO), preferably Aspergillus nincreasing the enantioselectivity of an amine oxidase enzyme. The enantioselective amine oxidase enzyme of the invention is useful in deracemization of amines. This sequence represents the wild-type Aspergillus niger monoamine oxidase protein of the invention.
                                                                                                                                                                                                                                                                                                                                   enantiomeric conversion; amine; homochiral; enzyme; oxidation catalysis; stereoselective; microbial; monoamine oxidase; MAO; enantioselectivity; deracemization; wild-type.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Enantiomeric conversion of amines comprises treating a homochiral amine or mixture of amine enantiomers with enzyme capable of catalyzing oxidation of amine and subsequently or simultaneously treating with a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

The present invention describes a predictor set comprising a plurality of polynucleotides or polypeptides whose expression pattern is predictive of the response of cells to treatment with a compound that modulates protein tyrosine kinase activity or members of the protein tyrosine kinase control of pathway. Also described: (1) predicting whether a compound is capable of modulating the activity of cells, comprising obtaining whether the cells, comprising botanining whether the cells, (2) a plurality of markers, and certaining the expression of the markers to the compound's ability to correlate which compound sensitivity or resistance of cells associated with a disease state; and (3) identifying polymucleotides and polypeptides where so not or more compounds sensitivity or resistance of cells associated with a disease state, comprising the expression pattern of a microarray of polymucleotides or polypeptides, and selecting the plurality or cell lines to one or more compounds, analysing the expression pattern of cells associated with a disease state by using the compounds that interact with polymucleotides and polypeptides are useful in predicting the ceststance of cells associated with a disease state by using the ceststance of cells associated with a disease state by using the ceststance of cells associated with a disease state by using the ceststance of cells associated with a disease state by using the compounds that interact with protein tyrosine kinase pathways. These may be used in determining drug centainity of compounds that interact with protein tyrosine kinase pathways. These may be used in determining deneric profiles which aid in treating diseases and disorders (e.g. cancer) based on patient response at a molecular level. The present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                New polynucleotides and polypeptides for predicting the activity of compounds that interact with protein tyrosine kinases and/or protein tyrosine kinase pathways.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention provides the protein and coding sequences of novel proteins from a variety of organisms, including human, dog, cat, horse, cow, pig, hamster, monkey, macaque, yeast, bacteria, fruit fly, sea urchin and tomato. These were derived from expressed sequence tags (ESTs) from the organism of interest. They can be used in diagnostics, forensics, gene mapping, identification of mutations, to assess biodiversity and for nutritional purposes. The present sequence is a

New nucleic acid molecule that encodes human semaphorin homolog, usef
in therapeutic, diagnostic and pharmacogenomic applications, in drug
screening and in clinical trial monitoring.

consistent of againstic and pharmacogenic applications, in drug screening, clinical trial monitoring, the treatment of physiological disorder or diseases, and in cosmetic or nutriceutical applications. (I) can be used for identifying coding sequences and mapping a unique gene to a particular chromosome, to screen libraries, to isolate clones, to prepare cloning and sequencing templates, as phyridistation probes for screening libraries and assessing gene expression patterns, in microarrays and other assay formats to screen collections of genetic microarrays and other assay formats to screen collections of genetic cidentify mutations associated with a particular disease, in a diagnostic or prognostic assay, as antisense molecule, and as part of ribozyme or prognostic assay, as antisense molecule, and as part of ribozyme corporations for the diagnostic state are useful for gene regulation. (I) can also be used for detecting mutant proteins or inappropriately corporate in the treatment of symptomatic or phenotypic manifestations of perturbing the normal function of a human semaphorin homologue in the coded by (I) least partially encoded by (I)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                      ABA04062 to ABA04087 represent polynucleotide sequences (I) which encode the human semaphorin homologous proteins (particularly similar to semaphorin G) given in AAG68289 to AAG68312 (II). (I) and (II) are useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; secreted protein; cancer; tumour; cardiovascular disorder;

The invention relates to 40 human secreted proteins (AAY94981-Y95020),
and cDNA sequences encoding them (AAA23423-A23462). The secreted proteins
CC frie invention include those that are thought to be only partially
secreted, i.e., transmembrane proteins. The proteins of the invention may
cactivity; cell proliferation; differentiation; immune modulation;
cactivity; chemotactic/chemokinetic activity; nactivin/inhibin
activity; chemotactic/chemokinetic activity; haemostatic and thrombolytic
activity; chemotactic/chemokinetic activity; haemostatic and thrombolytic
activity; chemotactic/chemokinetic activity; and tumour inhibition activity. The
cc activity; anti-inflammatory activity; and tumour inhibition activity. The
proteins may be administered to patients as vaccines, and the nucleotides
cmay be treated using the proteins or nucleotides of the invention include
autoimmune diseases; genetic disorders; haemophila; cardiovascular
diseases; cancer; bacterial, tungal and viral infections, especially HIV;
cdiseases; cancer; bacterial, tungal and viral infeations, and
allergic reactions such as asthma and anaemia. They may also be used for
treating wounds; burns, ulcers, osteoporosis, osteoarthitis; pulmington's disease
cand amyotrophic lateral sclerosis (ALS). Proteins with activin/inhibin
cc activity may additionally be useful as contraceptives. Nucleic acid
cactivity may additionally be useful as contraceptives. Nucleic acid
cactivity may additionally be useful as contraceptives. Nucleic acid
cactivity may additionally be useful as contraceptives. Nucleic acid
cone of the 40 proteins of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ò
